## **How Writing Came About**

**Denise Schmandt-Besserat : How Writing Came About** before purchasing it in order to gage whether or not it would be worth my time, and all praised How Writing Came About:

11 of 12 people found the following review helpful. An interesting scholarly book.By Z. MartinezThis book will take you through the ruins of an ancient city in Mesopotamia and then will explain the meaning of certain tablets and clay coins found there. The author is very clear in her explanations, there are plenty of pictures and graphics which make your understanding of the text easier. This book is for those who like reading scholarly material because it is very concise and precise on the subject but it could seem dry reading to those who prefer the material to be presented in a more entertaining way.I found it very interesting, and it helped me understand the transition from letters to numbers. I

loved it!0 of 1 people found the following review helpful. Informative and ReadableBy Rod ScherExcellent overview of the evolution of writing, by a researcher who is THE preeminent authority on the subject.1 of 4 people found the following review helpful. some interesting tidbits but not really written for the publicBy Robert ShulerThis was supposed to be a consolidated version of an earlier two-part academic work making the material accessible to the public. It simply fails. The author has no clue how to write a book and maintain interest past the introduction (which is pretty good, but you can read it in the preview). Even as a professor, well, I'd hate to try and stay awake in her class. And this subject normally fascinates me.

Winner, Top 100 Books on Science, American Scientist, 2001In 1992, the University of Texas Press published *Before Writing, Volume I: From Counting to Cuneiform* and *Before Writing, Volume II: A Catalog of Near Eastern Tokens*. In these two volumes, Denise Schmandt-Besserat set forth her groundbreaking theory that the cuneiform script invented in the Near East in the late fourth millennium B.C. the world's oldest known system of writing derived from an archaic counting device. *How Writing Came About* draws material from both volumes to present Schmandt-Besserat's theory for a wide public and classroom audience. Based on the analysis and interpretation of a selection of 8,000 tokens or counters from 116 sites in Iran, Iraq, the Levant, and Turkey, it documents the immediate precursor of the cuneiform script.

"Discoveries in the history of writing are rare, but Denise Schmandt-Besserat made one in realizing that phonetic writing in the West descends not from pictography, a view repeated everywhere, but from abstract, nonphonetic, mostly noniconographic accounting tokens used in Neolithic farming communities of the Near East beginning from about 8000 B.C. A condensation of volume I of *Before Writing* ...this book is a perfect production, utterly lucid, thoughtfully illustrated, and thoroughly convincing." (American Journal of Archaeology)From the Back CoverIn 1992, the University of Texas Press published *Before Writing, Volume I: From Counting to Cuneiform* and *Before Writing, Volume II: A Catalog of Near Eastern Tokens*. In these two volumes, Denise Schmandt-Besserat set forth her groundbreaking theory that the cuneiform script invented in the Near East in the late fourth millennium B.C. - the world's oldest known system of writing - derived from an archaic counting device. *How Writing Came About* draws material from both volumes to present Schmandt-Besserat's theory for a wide public and classroom audience. Based on the analysis and interpretation of a selection of 8,000 tokens or counters from 116 sites in Iran, Iraq, the Levant, and Turkey, it documents the immediate precursor of the cuneiform script.About the AuthorDenise Schmandt-Besserat is Professor of Middle Eastern Studies at the University of Texas at Austin.
