Russian Armour in the Second World War (Images of War)

Michael Green : Russian Armour in the Second World War (Images of War) before purchasing it in order to gage whether or not it would be worth my time, and all praised Russian Armour in the Second World War (Images of War):

8 of 8 people found the following review helpful. Nice general review of Russian armorBy Wyo JOTNice general review of Russian armor with lots of information on the T 34 series. Lots of high quality pictures of all the mentioned tanks and information on different versions. Not quite up to the standards required to be a guide for military modelers since the book lacks information on exterior colors and close-ups of key detail features. 's description of the book mentions color photos of exteriors and interiors when the pictures in the paperback are all black and white except for the cover photo. I hope that Michael Green will do a book on just the T 34 like his book on the Panther with the

detailed information that modelers need to truly produce a museum quality tank. This book is just what its title implies and worth five stars in my tanker's library. I have now decided to order a 1/16 scale radio controlled model to do a detailed version. 0 of 0 people found the following review helpful. Excellent choice. By Customer This book covers a great many armored vehicles of the Red Army in WW II. Section on pre-war, and early war tanks is very good, having pics of some very obscure and odd vehicles. Book is divided into sections, light, medium, and heavy tanks, and assault guns, with a short section of miscellaneous vehicles, mostly lend lease armor. Each section starts out with the early war vehicles, all those odd things with multiple turrets, and shows how they were changed into more useful machines. It could use a section on engineering vehicles, though, which is the only real criticism, I can give this book.

Other than that it is most helpful to any modeler of early Soviet armor. 0 of 0 people found the following review helpful. Now you will know why the Russians won their part of the war.... By Simon Scheuer Lots of good photos of the various machines the Russians used. The KV-2 deployed around the time the Russians started pushing the Germans back is particularly noteworthy. This tank is almost ignored yet is easily better than the Tiger I and at least the equal of the Tiger 2. It certainly should have scared the Allies after the war.

It was the Stalin tanks and armored fighting vehicles and their crews that finally pushed the German Army back from the outskirts of Moscow in late 1941 and early 1942. Proof of the Red Army tanks and AFVs effectiveness came at the Battle of Kursk in the summer of 1943 when they defeated the cream of the Panzertruppen. From that point on, the tanks and armored fighting vehicles of the Red Army continued their offensive operations until they victoriously entered Berlin in April and May 1945. This latest book in the Images of War series paints a broad picture of Russian tanks and armored fighting vehicles that defeated the might of Hitler's Panzer Armies. American expert Michael Green provides us not only historical images of the full range of Russian armor but also exterior and interior color photos of preserved and restored tanks and AFVs from the period.

About the Author Michael Green is a much published author and collector specializing in military and naval history. His works in the popular Images of War Series include *The Patton Tank* (2012), *Russian Armour in the Second World War* (2013) and *Armoured Warfare in the Vietnam War* (2013). He lives in Daly City, California.
